PRODUCT FOCUS
BASEBOARD

Tile Backer Board

Baseboard is a complete waterproof, tile backing board and insulating system for wet rooms, showers and bathrooms.

FOUND AT THE HEART OF ALL QUALITY TILING.

The Baseboard tile backer panels and preformed shower trays are innovative panels which can be used to create a waterproof surface for applying wall and floor tiles. The system is designed to be used instead of chipboard, ply or plasterboard, where it works to prevent water reaching the surface beneath the board.

Baseboard Panels

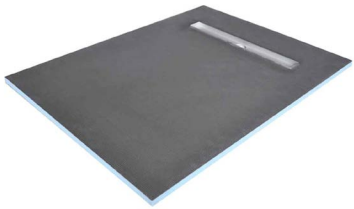

These panels are cement coated and included a strengthened fibreglass mesh, which ensures they are suitable for use on metal, timber stud work and existing walls and floors. The result will be a strengthened and stabilised level surface which is ready for tiling.

Length: 1200 and 2500mm
Width: 600mm
Thickness: 4mm, 6mm, 10mm, 12mm and 20mm

Baseboard Shower Trays

Our range of preformed shower trays are designed to create a level walk-in shower area, with a wide variety of shapes and styles available to suit every shower space and wetroom. These trays are also cement-coated and include a strengthening fibreglass mesh, which is ready to be tiled. The trays include a preformed fall to the drain location, with a choice of position and drain style available.

Length: 800mm, 900mm, 1000mm, 1200mm, 1500mm and 1800mm
Width: 800mm, 900mm, 1000mm and 1200mm
Thickness: 20mm, 25mm and 30mm

BENEFITS

-  **WATERPROOF**
TOTALLY IMPERVIOUS TO MOISTURE, PROVIDING A STABLE READY TO TILE SUBSTRATE.
-  **INSULATING**
HIGH THERMAL INSULATION PROPERTIES ENSURING MINIMAL HEAT TRANSFER TO ADJACENT SURFACES.
-  **LIGHTWEIGHT**
NO EXTRA LOAD REQUIREMENTS. EASY TO HANDLE AND CUT.
-  **VERSATILE**
SUITABLE FOR USE ON TIMBER AND METAL STUDWORKS, CONCRETE AND TIMBER FLOORS.
-  **UNDERFLOOR HEATING**
SUITABLE FOR USE BENEATH UNDERFLOOR HEATING.

THE ULTIMATE TILE BACKER BOARD

There are many potential applications with our range of Baseboards panels and trays, although they are most commonly used within showers, wet rooms, steam rooms and swimming pools.

Their versatility allows them to be used on metal and timber stud work, or on top of existing floors and walls to cover unstable and uneven surfaces. In addition, their

lightweight design means there are no extra load requirements and they are very easy to handle and cut.

The cement coated design combined with the strengthened fibreglass mesh, provides high thermal insulation properties. This will ensure minimal heat transfer to adjacent surfaces, making them ideal for use below electrical underfloor heating.

These panels are manufactured to the highest specifications and have become the industry benchmark for stable, impervious and durable tile backer boards and trays.

The baseboard range is ideal for use with the Aquatank tanking kit, which will create a completely waterproof surface for use beneath ceramic, porcelain, natural stone and mosaic tiles.
